1. Claims 1 – 15 are allowed.
2. The following is an examiner's statement of reasons for allowance: applicant discloses a novel method of implementing a microcircuit, where in the context of the entire claim, active components are mounted on a first side of a substrate, a cover is hermetically sealed over the active components, mounting passive components on the second side, testing the circuit, and removing and replacing the passive components as necessary.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited prior art teaches methods of fabricating multi-chip modules (MCMs). In particular, Terrill *et al.* (US 6,642,064) teaches a method of forming and testing active and passive components which follows the opposite process flow than that claimed by the applicant. It would not be obvious to reverse the process flow of Terrill *et al.* since Terrill *et al.* requires a specific thermal budget during fabrication.

4. A copy of the search history (EAST and STN) is enclosed.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christian Wilson whose telephone number is (571) 272-1886.

The examiner can normally be reached on weekdays, 7:30 AM to 4 PM.
